

PFL Satin Sealer is a highly durable 'wet-look' sealer with a matt finish. This sealer is ideal for external concrete surfaces including paths and driveways.

1. Description

PFL Satin Sealer is a hard-wearing sealer that can be applied to external concrete surfaces. PFL Satin Sealer can withstand vehicular traffic, making it an ideal driveway sealer. PFL Satin Sealer gives concrete a 'wet-look' finish, enhancing the concrete appearance. The unique matting agent in the sealer also gives the surface a matt finish, reducing glare off the concrete surface. PFL Satin Sealer can be used on exposed aggregate concrete. Sealing exterior concrete surfaces with PFL Satin Sealer will help protect the concrete from staining and marking, making the concrete easy to clean and maintain. PFL Anti-Slip can also be added to provide increased slip resistance.

Applications:

- Exterior residential concrete floors including paths and driveways.

Characteristics:

- Gives the concrete a 'wet-look', matt finish.
- Designed and manufactured in New Zealand.
- Can withstand vehicular traffic
- Can be used on exposed aggregate concrete.
- Easy to apply, and quick drying.

Limitations:

- Not for use on commercial floors.
- External concrete surfaces must be appropriately textured to prevent PFL Satin Sealer making the surface slippery.
- Sealer will not adhere to smooth stone surfaces – test areas must be conducted on ground or exposed aggregate to ensure adhesion, particularly on trafficable surfaces.
- Cannot be used as a waterproofing agent.
- Does not act as a filler – cracks and defects must be repaired prior to application.
- PFL Satin Sealer is a coating, so whilst durable, will wear over time.

This product guide covers the preparation, application, and maintenance of PFL Satin Sealer - if there is any question as to the suitability or application of this product please contact Peter Fell Ltd prior to use. Refer to the SDS for full Health and Safety information.

2. Precautions

- Do not seal any concrete under 28 days old.
- Do not apply to highly burnished or very 'tight' floors.
- Do not apply to concrete surfaces that have been treated with concrete densifiers/hardeners.
- Do not apply to concrete surfaces that are not *completely* dry, not just surface dry.
- Do not apply to any surface that has been previously treated with another product i.e. other sealers, curing compounds, etc.
- Do not seal concrete if the concrete temperature (not atmospheric) is below 12°C or above 30°C.
- Do not apply in the middle (hottest part) of the day or in high humidity.
- Do not use as a filler – any cracks, pitting or pinholes must be treated prior to application.
- Clean up any spills immediately to avoid staining.

3. Test Area

Prior to application of the sealer it is recommended that a test area is undertaken. This test area is to ensure that the sealer adheres correctly to the surface and gives the desired look and finish.

Slip resistance: it is important to check that application of the sealer to exterior surfaces does not make the concrete slippery.

- Once the sealer is cured, wet the area and check that the surface has required level of slip resistance.
- If slip resistance is not sufficient do not apply.

It is recommended that test area of 0.5 - 1.0 m² is executed according to the following protocol.

- Do the test area in a discrete part of the concrete that will be covered or hidden when the job is complete i.e. on side paths or under any fixtures.

Test pots and small volumes of all the sealer, preparation and cleaning products are available from Peter Fell Ltd.

4. Preparation

Prior to application it is important to establish that PFL Satin Sealer can be applied to the concrete.

- PFL Satin Sealer cannot be applied to new concrete treated with curing compounds or other similar products.
- Some highly burnished or ground/honed floors will be too dense or 'tight' to allow the adequate adhesion.
- Old floors previously treated with other sealing compound, or contaminated and stained, will also not accept a sealer.

A simple 'water test' can quickly show if the floor will 'accept' the coating:

- Drop a small amount of water on the concrete surface.
- If the water penetrates (darkens) the concrete within 15 - 30 seconds the concrete is likely to accept the sealer.
- If the water beads on the surface this would indicate that the concrete has high surface tension (too dense) and is not suitable for sealing with PFL Satin Sealer.
- Beading could be due to other factors such as contaminants or other treatments in or on the concrete.
 - These contaminants or treatments must be removed prior to any sealer application.

The concrete must be completely dry before applying PFL Satin Sealer. If it is uncertain whether the floor is dry, conduct a Plastic Sheet Test (ASTM D4263) to confirm:

- Tape a plastic sheet (45 x 45 cm) onto the concrete surface being tested; ensuring an airtight seal between the concrete and the plastic is formed. After 24 hours remove the plastic sheet. Concrete can be coated if no moisture/condensation is present on the underside face of the sheet, or if concrete has not darkened (compared to adjacent concrete).
 - Use low tack tape to avoid marking the concrete surface.
- If moisture is present, allow to dry and repeat test.

If PFL Satin Sealer can be applied to the concrete, then prepare the concrete as follows:

New concrete surfaces:

- If dirty, clean the floor with **PFL Neutralizer & Cleaner** or **PFL Concrete Cleaner** (see Product Guides for application instructions).
- Prepare the floor for sealing with **PFL Surface Preparation** or **PFL Surface Prep Lite** followed by **PFL Neutralizer & Cleaner** (see Product Guide's for application instructions).

Ground or burnished concrete floors:

- PFL Satin Sealer can be applied to floors ground to 120 metal bond or less only if they have *not* been densified.
- Ground or honed floors typically do not require treatment with PFL Surface Preparation (acid wash).
- Ensure the floor is clean and dust free – clean with **PFL Concrete Cleaner** if required then rinse the floor with fresh clean water.

Old concrete floors:

- Any existing coating should be removed by grinding and the water test repeated to ensure all remnants have been removed.
- Any contaminated areas should be treated with appropriate cleaning agents and pass the water test prior to application of the sealer.
- Once any coatings have been removed and contaminated areas treated, clean the floor with **PFL Concrete Cleaner**, then rinse once with fresh clean water.

5. Equipment

- Bucket or paint tray.
- The sealer can be applied with any of the following:
 - Soft bristle broom: recommended for textured surface and exposed aggregate concrete.
 - **PFL Brooms** are available from Peter Fell Ltd, otherwise ensure broom head is solvent proof.
 - Roller: recommended for smooth or ground concrete. Solvent proof, 5mm nap mohair roller or similar.
 - Sprayer: spraying is not recommended due to the viscous wax matting agent in the sealer.
- Safety Equipment – see section 11. Safety and Handling.

6. Application

PFL Satin Sealer should only be applied when new concrete floors are fully cured (at least 28 days after pouring), and as with old concrete surfaces, concrete prepared as above.

If **PFL Anti-Slip** is being used, add to the sealer prior to application – see Product Guide for full instructions.

New concrete floors:

- Apply in thin coats, avoid pooling.
- Apply minimum 2 coats.
 - 'open' or porous floors may require a third coat to form an even surface coating.
- Drying time between coats is typically 2 - 4 hours after application.

Ground concrete floors:

- PFL Satin Sealer can be applied to floors ground to 120 metal bond or less only if they have *not* been densified.
- Apply in thin coats, avoid pooling.
- Apply minimum 2 coats.
 - most ground floors will require a third or fourth coat to form an even surface coating.
- Drying time between coats is typically 2 - 4 hours after application.

Old concrete floors:

- Apply the same as the appropriate type of floor above.

Drying:

- Allow 24 hours curing (drying) before use.
- Vehicles can be used on the sealed surface 48 hours after sealing.

Coverage:

- Approximately 5 – 8 m²/L
 - Coverage will vary greatly depending on the porosity and texture of the concrete.

Clean-up:

- All equipment can be cleaned with **PFL Glaze Clean-up & Thinners**, HOWEVER it is recommended that applicators are simply disposed of.
 - PFL Glaze Clean-up & Thinners contains dangerous chemicals and must be handled with extreme care, that is why we advise disposing of any application equipment to avoid handling these chemicals.

7. Maintenance

- Concrete sealed with PFL Satin Sealer should be cleaned using with **PFL Concrete Cleaner**.
 - Refer to the Product Guide or contact Peter Fell Ltd for product information.

8. Re-sealing

PFL Satin Sealer can be re-applied over PFL Satin Sealed floors that are in good condition.

If the sealer is old or appears worn it is recommended that **PFL Surface Conditioner** is used to prepare the surface for re-sealing with PFL Satin Sealer.

- Refer to Product Guide for application instructions for PFL Surface Conditioner

If the sealer or concrete surface is very worn, stained, or damaged it is recommended that the floor is ground/honed prior to re-sealing. This process will alter the surface appearance by exposing the aggregate which should be considered prior to re-sealing.

For standard re-sealing of surface in good condition do the following:

- Clean concrete thoroughly with **PFL Concrete Cleaner**.
- If concrete is smooth, use low grit sandpaper (less than 240 grit) lightly sand the floor to provide a key for re-seal.
 - Ensure any worn or damaged areas of sealer are sanded back appropriately.
- Clean floor thoroughly with **PFL Concrete Cleaner** and then rinse once with fresh clean water and allow to dry completely.
- Apply sealer with a roller or soft bristle boom in thin coats, avoid pooling.
- Apply additional coats as required to form an even surface coating
- Drying time between coats is typically 4 - 6 hours after application.

9. Removal

Removal of PFL Satin Sealer is difficult and can result in damage or alteration of the concrete surface and as such is not recommended. If required the sealer should be removed mechanically by grinding/honing the floor. This process will alter the appearance of the floor by exposing the aggregate (stones) which should be considered prior to removal of the sealer.

10. Storage and Handling

Pack Sizes: 1, 2, 5, 10, and 20 L units.

Handling: Wear suitable protective clothing – see section 11. Personal Protective Equipment.

Storage: Store in cool, dry, well ventilated place in original container. Store out of reach of children. Store away from direct sunlight, oxidizing agents (e.g. nitrates), acids, anionic, detergents, and foodstuffs. Keep away from naked flames and other heat sources. Take precautions against static discharge. Ensure container is sealed when not in use and checked regularly for leaks or spills. Do not allow vapours to collect in enclosed spaces. PFL Satin Sealer can be stored for up to 12 months.

11. Personal Protective Equipment

Eyes: Avoid contact with eyes. Use safety glasses and/or chemical splash goggles.

Skin: Suitable protective workwear e.g. cotton overalls buttoned at the neck and wrist is recommended. Chemical resistance apron is also recommended where large quantities are handled.

Protective gloves are recommended. PVA or Viton/Butyl gloves are recommended. Replace frequently. Gloves should be checked for tears or holes before use. Open cuts abraded, or irritated skin should not be exposed to this material.

Rubber safety boots.

Respiratory: A respirator is recommended when airborne concentrations approach the Workplace Exposure Standard (WES) – see SDS for more information. Use a respirator with an organic vapour cartridge and a dust/mist filter. If using respirator, ensure that the cartridges are correct for the potential air contamination and are in good working order.

Refer to the SDS for full Health and Safety information.

12. First Aid

Swallowed: DO NOT induce vomiting. Give water or milk to drink. Obtain medical attention immediately. For emergency information contact the *National Poisons Centre (0800 764 766)*.

Eyes: Immediately flood with copious quantities of water, holding eye open if necessary, for at least 15 minutes. Seek urgent medical attention.

Skin: Remove contaminated clothing and shoes and wash skin thoroughly with excess water. If irritation occurs or persists, seek medical attention. Launder clothing and clean shoes before re-use.

Inhalation: Remove patient from exposure, keep warm and at rest. If there is respiratory distress, give oxygen and seek immediate medical attention.

13. Physical Properties and Identification

<i>Appearance (in pack):</i>	White milky liquid
<i>Appearance (when dry):</i>	Transparent
<i>Odour:</i>	strong solvent odour
<i>Solubility:</i>	soluble (in water)
<i>Wet film thickness:</i>	approximately 35 - 50 micron
<i>Dry film thickness:</i>	approximately 20 - 40 micron
<i>UN Number:</i>	1263
<i>HSNO Approval:</i>	HSR002662
<i>Hazchem code:</i>	3Y
<i>DG Class:</i>	3
<i>Packing Group:</i>	III

Product Warranty
